

# Informed Fleet Management & IoT-Enabled Workstations

**ClioConnect™** is an IoT-enabled solution for fleet management, involving the new **ClioAir Connect™** EMR/technology cart and ClioConnect Fleet Management dashboard. Through the Fleet Management dashboard, a single—or group of administrators with internal or third-party service provider—can manage an entire fleet of carts in multiple departments and locations.

## Each administrator and user is empowered to:

### Relative Location Tracking

See the relative location of every cart in the fleet.

### Cart Assignment & Standards

Assign carts to specific buildings and departments. Create cart standards for specific disciplines, departments and use cases by assigning the peripheral technology integrated to each cart in the fleet.

### Ticket Management

Create new service tickets and triage, troubleshoot, decommission carts, release and close service tickets created directly from the ClioAir Connect carts.

### Efficient Troubleshooting

Trouble-shooting open service tickets from the dashboard, accessing the vast, available information from a powered cart's battery and power controller, ensures that, if a service technician is deployed, they arrive onsite with the right part(s) in the last known location of the cart. Uptime is maximized.

### Ticket Monitoring

View all open and closed service tickets, the service requirement and time to resolution of a service issue.

### Cart Utilization Tracking

Continuously monitor the utilization of the carts as they're automatically categorized as optimally-, under- and over-utilized, enabling optimization of capital expenses through redeployment of under-utilized carts where they are immediately needed instead of simply purchasing new carts.

## The Value of ClioConnect

### Clinical Teams

- ✓ Enhance bedside care
- ✓ Streamline workflows
- ✓ Real-time data access
- ✓ Simplify admin tasks
- ✓ Improve ergonomics

### IT Teams

- ✓ IT system integration
- ✓ Data security
- ✓ Intuitive dashboard
- ✓ Reduced IT workload
- ✓ Proactive battery monitoring

### Supply Chain

- ✓ Advanced analytics
- ✓ Cost management
- ✓ Equipment availability
- ✓ Cart inventory optimization
